

Figure 3.11 These diagrams, originally published in IES Technical Report 15, can be used to produce overlays for use with the IR charts in that document.

## 3.7 Energy management

A lighting system must be designed and managed to achieve good control of energy use. This is important during the working day and outside working hours.

### 3.7.1 Choice of controls

The factors that influence the specification of controls include occupancy, occupancy pattern, available daylight, type of lighting
