

1.2 Manual Development Process

1.2.5 Data Analysis and Validation

An extensive analysis and validation process was formulated to compile the trip generation and parking rates for each Land use Class. The process involved three sequential steps as presented in Figure 5 below:

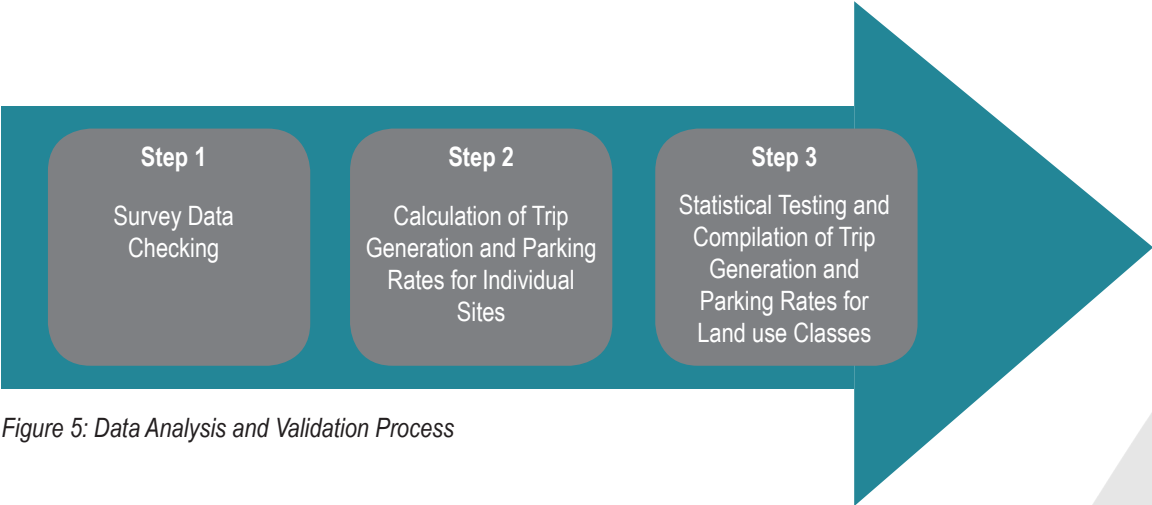

Figure 5: Data Analysis and Validation Process

Step-1 Survey Data Checking

Prior to undergoing statistical analysis, the survey information collected from site was thoroughly checked to ensure the data was uniform and accurate. This involved a series of routine assessments and spot checks to identify any errors in field data collection or data entry.
