

Example 3.6b: Summary of outdoor strategies

No Asbestos Containing Material (ACM) is used and no Chromated Copper Arsenate (CCA) treated timber is used on external structures

Use of external building materials that achieve required U-values provide thermal mass, provide vapour barrier, and have light colour finishes

Glazing that maximises daylight whilst minimizing heat gains

Reflective (SRI>29) overhangs to provide additional shading to walkways

Dedicated external smoking area away from air intakes and openings

Shaded entrance not aligned with prevailing hot winds for pedestrian comfort

Vehicular access on secondary road

Waste storage at ground level provides enough space for vehicle manoeuvring
