

SEISMIC ANALYSIS AND DESIGN REQUIREMENTS FOR BUILDINGS

1. GENERAL REQUIREMENTS	1
1.1. SCOPE, NOTATIONS, REFERENCE STANDARDS	1
1.1.1. Scope	1
1.1.2. Notations	1
1.1.3. Reference standards	6
1.2. SEISMIC GROUND MOTION	7
1.2.1. Earthquake levels	7
1.2.2. Representation of ground motion: Elastic Response Spectrum	7
1.2.3. Representation of ground motion in time domain	8
1.3. SEISMIC PERFORMANCE OBJECTIVES	10
1.3.1. Classification of buildings	10
1.3.2. Performance levels and ranges	10
1.3.3. Minimum performance objective for low- to medium-rise buildings	11
1.3.4. Multiple minimum performance objectives for tall buildings	11
1.4. GENERAL GUIDELINES FOR ARRANGEMENT OF BUILDING STRUCTURAL SYSTEMS	13
1.4.1. Structural simplicity	13
1.4.2. Uniformity, symmetry and redundancy	13
1.4.3. Adequate resistance and stiffness	13
1.4.4. Diaphragm action	14
1.4.5. Adequate foundation	14
1.5. REGULARITY REQUIREMENTS	15
1.5.1. Definition of Irregular Buildings	15
1.5.2. Conditions for Irregular Buildings	15
1.6. PRIMARY AND SECONDARY SEISMIC MEMBERS	17
1.6.1. Primary members	17
1.6.2. Secondary members	17
2. SEISMIC ANALYSIS REQUIREMENTS OF BUILDINGS	18
2.1. PARAMETERS OF DESIGN RESPONSE SPECTRUM	18
2.1.1. Importance Factors	18
2.1.2. Seismic Load Reduction Factors	18
2.1.3. Design Response Spectrum	19
2.2. SEISMIC ANALYSIS	20
2.2.1. Applicable analysis methods	20
2.2.2. Selection of analysis method for low- to medium-rise buildings	20
2.2.3. Definition of seismic mass	20
2.2.4. Consideration of vertical component of earthquake	21
2.3. EQUIVALENT SEISMIC LOAD METHOD	22
2.3.1. Displacement components and application points of seismic loads	22
2.3.2. Base shear	22
2.3.3. Storey seismic loads	22
2.3.4. Predominant period	23
2.3.5. Directional combination	24
2.4. MULTI-MODE RESPONSE SPECTRUM ANALYSIS METHOD	25
2.4.1. Dynamic degrees of freedom	25
2.4.2. Modal seismic loads	25
2.4.3. Number of vibration modes	26
