

Introduction

Open space publicly accessible area of public realm or inaccessible landscape. It can include either formal or informal activities or a combination of the two and should form part of a wider open space network allowing people to move easily between one space and another.

Examples of open space include landscape, pocket park, district park, community park, playground, buffer zone, promenade, beach, break water, water body, and conservation area. It may be entirely designated as open space or included within the design of other land uses.

Open space can incorporate hard and soft landscape features such as planted gardens or stone paved plazas. It may also incorporate small pavilions or structures that provide public facilities and attractions. They should ideally be multifunctional and flexible and provide environmental, social and economic benefits.
