- Boreholes for soil investigations.
- New overhead lines across the main roads.
- Equipment installations within the ROW.
- Notice of intent for new projects requested by consultants.
- Notice of intent requested by contractors.
- Completion certificates for other SAUP.

2.2.3.2 Right of Way Section

Any work within a ROW requires NOC from DoT. The Right of Way Section is responsible to process and issue a consolidated NOC for all works within ROW on behalf of all the relevant divisions of DoT.

ROW Section mandate includes the following:-

- Undertake integrated ROW Management;
- Deal with engineering issues within, or impacting upon ROW;
- Undertake process of receiving, assessing, and responding to NOC applications during all project phases;
- Representing the DoT on the Stakeholder Coordination Committee; and
- Coordinating and site monitoring of works within the ROW.

The ROW Section performs two main roles in the NOC process. The first role is that of custodian of the overall macro NOC process and includes facilitating and expediting the issuance of consolidated NOCs on behalf of the DoT. This also includes ensuring that all the relevant internal DoT Sections are consulted and that the necessary quality management processes are followed during the compilation of the consolidated NOCs.

The second role refers to the divisional role, which is undertaken by ROW section. In this role, the ROW Section executes a similar role as other internal DoT Sections by reviewing NOC applications in terms of their technical compliance with regard to their respective fields of expertise.

DoT provides an online service to applicants, which assists the applicants in obtaining ROW related NOCs from DoT through the following website:
