

**904.07 STANDARD ARABIC SCRIPT
FOR HIGHWAY SIGNS**

This section consists of pages numbered 1 through 14 of 14. The design of each letter and number is shown on a 5 mm grid in Figures 900.06 through 900.17. Letter shapes are shown when the letter occurs at the end of a word (or is unconnected), at the beginning of a word, and in the middle of a word (generally shown left to right respectively). The length of the connections to proceeding and following letters are included in the design. However, they may be increased slightly to maintain proper proportion with the English legend if it is larger than the Arabic legend.

Letter height and spacing between words shall be detailed in the project drawings.

Certain Arabic letters are not connected with letters which follow in the same word. The space between the letters and the letters which follow them are given in Figure 900.05.
