

1.9 Integration with Other Manuals

The UCDM and other UPC manuals, including the USDM and the Abu Dhabi Public Realm Design Manual (PRDM), are complementary documents used together for the development of Complete Streets, which are designed and built to accommodate all users in a safe and comfortable manner. Figure 1.4 illustrates the zones of a typical RoW (plot boundary to plot boundary) that make up a Complete Street.

The UCDM shall be used in conjunction with relevant manuals, engineering and environmental standards developed by other entities in the Emirate of Abu Dhabi, as illustrated in Figure 1.3. During the detailed design of utilities, UCDM principles should not be compromised.

The UCDM shall supersede and replace all portions of utility providers' standards and guidelines pertaining to utility corridors width and location, which may be in conflict with the material contained herein.

Note: This is for illustrative purposes only and is not an exhaustive list of all relevant manuals in Abu Dhabi.
