

Due to the fact that the ENEC mark is to be applied by an independent certification body, it is advisable to look for ENEC certification together with the CE mark. The ENEC mark indicates independent confirmation that the product complies with all relevant EN safety standards and, where available, EN performance standards.

*NOTE 1 The ENEC mark is not applicable to lamps or emergency luminaires. The ENEC mark is not obligatory.*

Testing and approval are carried out by national Certification Bodies, e.g. in the UK by BSI. The XX in the diagram is replaced by a number from 01 to 17 (European Country Code), e.g. 12 for the UK. The ENEC mark of each of the Certification Bodies is valid throughout the EU. Again, it is important to note that ENEC marks on components do not imply that a luminaire has an ENEC mark. Furthermore, if a luminaire is modified, then the modifier must remove the ENEC mark.

ENEC (country code)  
according to DIN EN60398
