

- B. Suspension of the work will be measured from date of issue of a 'Health and Safety Instruction' indicating that, the Engineer will not inspect and approve that particular part of the work until the unacceptable affects in the Work are repaired. In any instance where an order is given for suspension of work affected by the Contractor's health and safety violations or negligence, the Contractor shall have no right to claim any extension of the completion date or to claim for compensation for the suspension of the Work or for the waiving of the liquidated damages.
- C. In addition, if the Contractor does not fulfil his obligations under the Contract for the performance of proper safe working practices, a deduction shall be made to the monies due to the Contractor. The value of this penalty is in addition to and does not form part of Contract Delay penalties.

#### **18.1.7 Site Safety Notice Boards**

- A. The Contractor shall set up, maintain and remove, when directed by the Engineer, throughout the course of the contract, safety notice boards in prominent places on the site for his labour force. These notice boards shall be located in positions approved by the Engineer such that they are clearly visible to the Contractor's employees. The Contractor shall select safety signs appropriate to the hazards and relevant emergency contact information and these shall be to the approval of the Engineer before manufacture. The Contractor shall ensure that appropriate safety signs are maintained as required relevant to the hazards. The Contractor's staff and labour force shall be made fully aware of the safety signs and emergency contact information prior to commencing duties on site.

#### **18.1.8 Impact on Environment and Services**

- A. The Contractor shall take account of the impact of his activities on the environment and existing services in the vicinity of the works as given below. This information is not exhaustive and therefore the Contractor shall examine the contract documents/specification, contract drawings and program of works to identify any other effects of his activities. The Contractor shall comply with the federal law and enforcing regulations on environmental protection and any local orders currently in place. The Contractor shall identify wherever any activities, which take place as part of the project, may have an impact on the environment, which shall comprise, but not necessarily be limited to:
