

and periodically as work progresses the services of the manufacturer's technical representative must be provided at the work site as often as deemed necessary by the Engineer to advise on all phases of the work.

2. The Contractor shall follow the manufacturer's recommendations for specific procedures and details not specified herein.
3. The following conditions shall apply wherever coatings, membranes, in-situ GRP lamination or waterproofing work is being carried out.
 - a. Work shall only be undertaken when the ambient temperature is within the ranges recommended by the manufacturer.
 - b. Sufficient lighting to the approval of the Engineer shall be provided and used whenever work is in progress.
 - c. Forced draught ventilation to the approval of the Engineer shall be provided and used whenever work is in progress.
 - d. When the humidity rises above 85% where there is a danger of condensation on the surface affecting operations, works shall cease and re-start only with the approval of the Engineer.
 - e. No work shall be carried out during a sand storm as determined by the Engineer.
 - f. Primers to concrete shall not be applied until the moisture content of the cementitious surface is less than 5% when measured by an electronic moisture meter or other instrument approved by the Engineer.
 - g. Where appropriate adjacent surfaces shall be protected by the use of drop cloths or other approved precautionary measures.
 - h. The manufacturer's recommendations concerning health and safety shall be followed.
 - i. Operatives shall work not less than two in number.
 - j. Procedures and treatment plans shall be in force in the event of any accidents occurring.
4. The Contractor shall take all necessary measures to prevent damage to installed coating/membrane/lining/waterproofing from equipment, materials and personnel until completion of the Works. Any damage resulting from the Contractor's operations shall be repaired to the satisfaction of the Engineer at the Contractor's expense.
