

## Introduction

The Master Plan Overview must demonstrate how the development objectives and design principles have shaped the emerging master plan.

Fundamental to this is to identify how the outcomes of the site analysis and the resulting understanding, translate into the design and development of the proposed master plan. It is also important to demonstrate how any high level principles and master plan aspirations translate into the spatial layout of the proposed master plan.

This chapter provides an outline of what the Master Plan Overview must contain and how this will allow DDA to assess any master plan from a qualitative perspective.
