- a. The mosques that are in the area of commercial works are excluded from the condition of providing parking lots. The competent administration can reconsider the number of the required parking lots for mosques if there are public parking lots related to the mosque or if the area of the land which is dedicated for the mosque is small.
- b. The number of the prayers should be calculated where (8) square feet is for one prayer and this does not include the number of the prayer outside the mosque land.
- c. When designing the mosque , the following conditions should be observed :
 1. Designing and executing and supervising should be done by Muslim hands that have a good experience in the Islamic architecture and constructional works and the manager of the consultive office who is in charge of this should be Muslim as well as the engineers who are designing and supervising the mosque.
 2. It is preferred that the mosque should be rectangle where the longest side should be headed to the kiblah. It is not preferred to make openings on the side that has the mihrab. It is preferred also to cancel any columns in the mosque land to keep the continuation of lines.
 3. There can be an office, an oratory for women, a storehouse and rooms for the memorization of the Koran which are supplement with the mosque. Their
