

- E. The board shall be protected as work proceeds against prolonged exposure to sunlight, damage and displacement before finished surface protection is applied.

3.3.2.4 Precast Concrete Tiles

- A. All joints shall be uniformly straight, in line and level.

3.3.3 Flood Testing

- A. The horizontal areas of waterproofing shall be tested prior to the installation of insulation.
- B. Testing shall be by flooding sections of the waterproofed area with a minimum 50mm head of water for 48 hours.
- C. Any area where leaks occur shall be drained, thoroughly dried, repaired and then re-tested.
- D. After completion of flood testing, remove all traces of water to the satisfaction of the Engineer.
- E. Installation of insulation board and concrete tiles shall not start until such time as the membrane is leak free and has been accepted by the Engineer.
