

The conceptual flow process detailing procedure related to the Construction NOC is presented in Figure 7 below.

Figure 7: Flow Process Detailing Procedure Related to Construction NOC

2.4 Submission of NOC Applications

Presently, online NOC applications are accepted by DoT and ADM, however, other SAUP accept manual applications. A list of SAUP that may be referred for the submission and processing of the NOC applications depending on the requirements of the project is provided in the Table 5 below. It is necessary to ensure that all the relevant forms required by the SAUP are submitted and the detailed procedures as per their defined protocols are followed.

The NOC procedure and requirements should be coordinated with the Abu Dhabi Systems and Information Centre (<http://adsic.abudhabi.ae>). It should be within the new system of the common solution for issuing NOC through the issuer (e.g. ADM, AAM and WRM).

Reference should be made to respective manuals and standard details regarding the procedure and requirements for commissioning, energizing, shutdowns and/or activation of projects including street lighting, water lines, and sewer line.
