

2.4.4. Modal combination	26
2.4.5. Scaling of response quantities	26
2.4.6. Directional combination	27
2.5. RESPONSE HISTORY ANALYSIS METHOD	28
2.5.1. Linear Response History Analysis	28
2.5.2. Nonlinear Response History Analysis	28
2.6. SAFETY VERIFICATION	29
2.6.1. Strength verification	29
2.6.2. Load combinations for seismic design	29
2.6.3. Second-order effects	29
2.7. DAMAGE LIMITATION	31
2.7.1. Limitation of story drifts	31
2.7.2. Seismic joints	31
2.8. ANALYSIS REQUIREMENTS FOR NONSTRUCTURAL SYSTEMS	33
3. SEISMIC DESIGN REQUIREMENTS FOR REINFORCED CONCRETE BUILDINGS	34
3.1. SCOPE AND DESIGN CONCEPTS	34
3.1.1. Scope	24
3.1.2. Design Concepts	34
3.1.3. Structural types and Behaviour Factors	34
3.1.4. Design actions	35
3.1.5. Capacity Design Rules	36
3.1.6. Material requirements	37
3.1.7. Local ductility requirements	37
3.2. SEISMIC DESIGN REQUIREMENTS FOR REINFORCED CONCRETE BEAMS	38
3.2.1. Geometrical requirements	38
3.2.2. Design shear forces of beams	38
3.2.3. Seismic detailing of beams	39
3.3. SEISMIC DESIGN REQUIREMENTS FOR REINFORCED CONCRETE COLUMNS	40
3.3.1. Geometrical requirements	40
3.3.2. Design shear forces of columns	40
3.3.3. Seismic detailing of columns	40
3.3.4. Seismic detailing of beam-column joints	41
3.4. SEISMIC DESIGN REQUIREMENTS FOR REINFORCED CONCRETE STRUCTURAL WALLS	43
3.4.1. Geometrical requirements	43
3.4.2. Design bending moments and shear forces of structural walls	43
3.4.3. Seismic detailing of structural walls	44
3.5. REQUIREMENTS FOR ANCHORAGE AND SPLICING OF REBARS	45
3.5.1. General	45
3.5.2. Anchorage of rebars	45
3.5.3. Splicing of rebars	46
3.6. DESIGN AND DETAILING OF SECONDARY SEISMIC ELEMENTS	
3.7. SEISMIC DESIGN REQUIREMENTS FOR FOUNDATIONS	48
3.7.1. General	48
3.7.2. Tie-beams and foundation beams	48
3.7.3. Connection of vertical elements with foundation beams and walls	48
3.7.4. Cast-in-place concrete piles and pile caps	49
