

Figure 84. Alternative path in the opposite sidewalk

5. Accessible pedestrian paths shall not be obstructed during specific operations of loading, unloading and material supply.
6. Where material and debris generated by the construction have to be stored on the road, it shall be clearly marked and protected to ensure that it does not constitute a danger for pedestrians or vehicles.
7. In the case of pedestrians walking over trenches protected with metal plates, the metal structures shall have a minimum width of 900 mm, with guardrails on both sides. Guardrails must follow the requirements of section 5.5. These metal plates must provide a stable surface and be level with the surrounding surface.
