

Figure 175

Right-click 'Street 1' in the Project Tree, and choose 'Insert Street Arrangement' from the menu - see Figure 176.

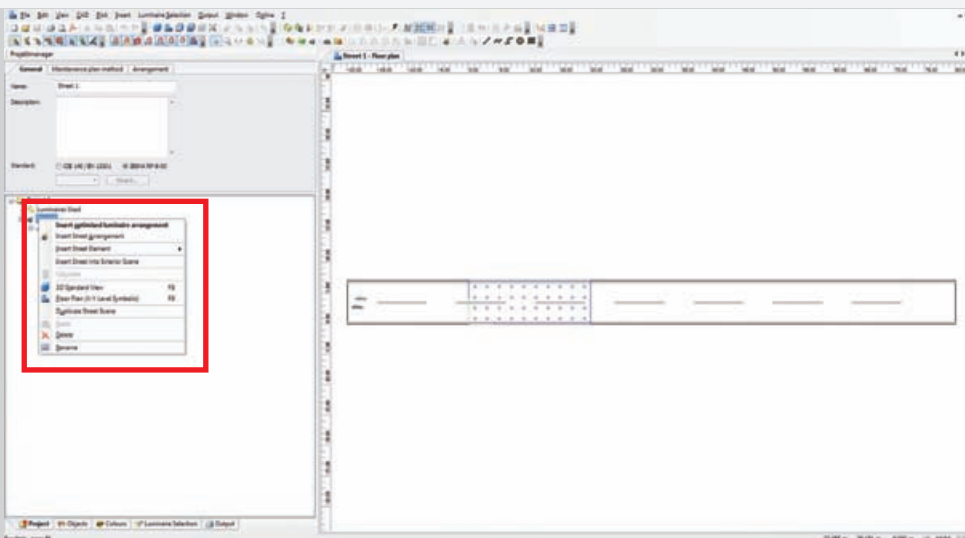

Figure 176

The options for the street arrangement appear above the Project Tree. The first tab is called 'Luminaire' and shows the type of luminaire to be used. The luminaire calculation files must be imported in DIALux before they are available in the drop-down menu of this tab. Different 'Luminaire Calculation Files' are available from the different manufacturers websites or through DIALux Plugins - see Figure 177.
