

to the last point, as required for best practice, and this means that, on-site aiming and locking, or during site installation, the contractors are not able to apply the aiming as required to optimize the lighting.

As a result of the previously described facts, there is a high risk that glare and/or light pollution may occur. See Figure 102.

Figure 102
Samples of in-ground and above-Ground lights used in Abu Dhabi.

NOTE 1 Above-ground lights should be placed with care and in view to size of task. Additionally it should be considered that especially above-ground lights can cause glare and light pollution.
