

Chapter 14: Lighting for hospitals

14.1 Functions of lighting in hospitals	203
14.2 Factors to be considered	203
14.2.1 Daylight	203
14.2.2 Lines of sight	203
14.2.3 Colour rendering requirements	203
14.2.4 Observation without disturbance to sleep	204
14.2.5 Emergency lighting	204
14.2.6 Luminaire safety	204
14.2.7 Cleanliness	205
14.2.8 Electro-magnetic compatibility (EMC)	205
14.3 Approaches for the lighting of different areas in hospitals	205
14.3.1 Entrance halls, waiting areas and lift halls	206
14.3.2 Reception and enquiry desks	206
14.3.3 Hospital streets and general corridors	207
14.3.4 Changing rooms, cubicles, toilets, bath, wash and shower rooms	207
14.3.5 Wards	207
14.3.6 Reading lighting	211
14.3.7 Night lighting	211
14.3.8 Night observation lighting (watch lighting)	211
14.3.9 Clinical areas and operating departments	212
14.3.10 Operating theatres	212

Chapter 15: Quasi-domestic lighting

15.1 Functions of quasi-domestic lighting	214
15.2 Factors to be considered	214
15.2.1 Occupants' capabilities	214
15.2.2 Daylight	214
15.2.3 Light source colour properties	214
15.2.4 Energy efficiency	215
15.2.5 Safety	215
15.2.6 Security	216
15.3 Lighting recommendations	216
15.4 Approaches to lighting quasi-domestic buildings	217
15.4.1 Entrances	217
15.4.2 Corridors and stairs	217
15.4.3 Study bedrooms	218
15.4.4 Kitchens and utility rooms	218
15.4.5 Lounges	219
15.4.6 Dining halls	219
15.4.7 Games room	219

Chapter 16: Road lighting

16.1 Road classification	220
16.2 Lighting for traffic routes	220
16.2.1 Lighting recommendations for traffic routes	220
16.2.2 Lighting recommendations for areas adjacent to the carriageway	223
16.2.3 Lighting recommendations for conflict areas	224
16.2.4 Coordination	225
16.2.5 Traffic route lighting design	225
