

2.8.3 Responsibilities

For any Greenfield project, which fall under the Non-common Master Plan developments or existing Master Plans in the UAE, the operators will take responsibility of coordination with the master plan developer/building developer for common infrastructure requirements. The operators will assist the master plan developers/building developer through a “No Objection Certificate” (NOC) process that includes OSP design drawing validation, ISP design drawing validation, validating ISP material to be from the pre-approved manufacturer list and site inspections during implementation.

To have a sound and smooth process it is important for master plan developers/building developer as well as municipalities to have a single point of contact for each project. Moreover, as some municipalities are streamlining the whole process of obtaining a building permit not only with regard to telecoms issues, it is of great importance to have a defined single point of contact at the licensees.
